TECH STACK

How Your Tech Stack Is Silently Costing You Deals

It's never one dramatic failure. It's minutes, added up across every deal.

COST 1

Pricing and CRM live in separate tabs

Every quote that requires switching systems costs a few minutes. Multiply that across every deal, every month, and it's hours of borrower-facing delay that never shows up as a single incident.

1

COST 2

The term sheet doesn't pull from the same record as the quote

When the two aren't connected, small mismatches creep in — and a requote after the borrower already said yes is one of the fastest ways to lose confidence.

2

COST 3

Two systems, one person keeping them in sync

That person's time is the real cost — not the software licenses. Every hour spent reconciling is an hour not spent on origination or relationships.

3

COST 4

None of this shows up as a lost deal immediately

Slower velocity today becomes lost deals later — with enough of a delay that the original cause is hard to trace back.

4

THE FIX

Fewer connected systems beat more disconnected ones

The goal isn't a bigger tech budget. It's a smaller number of systems that reference the same record, so no human has to be the integration layer.
