

EZ RATE SHEET

6 Tools You Can Consolidate

What the private lending tech stack looks like — and what it should look like

TOOLS 1 + 2

CRM + Rate Sheet → One System

When pricing and borrower records live in separate platforms, data gets re-entered. When they're unified, quotes become records automatically. One less handoff. One less place for error to enter the process.

Pipeline + Docs → Integrated

A deal moving from quote to close shouldn't require manual handoffs between systems. Pipeline status and documentation should update together. Every manual step between them is a recurring time tax on your team.

TOOL 5

Borrower Portal → Built In

A standalone borrower portal that doesn't talk to your CRM or pipeline creates manual reconciliation. That's a monthly time bill you're paying invisibly — and a data sync problem waiting to surface at the wrong moment.

TOOL 6

Reporting → Automatic, Not Assembled

If your monthly report requires someone to pull from three systems and reconcile manually, you don't have a reporting tool. You have a reporting process that's consuming someone's Friday every month without delivering insight.

THE RESULT

Fewer Tools. Fewer Handoffs. One Source of Truth.

300+ lending systems built. The shops that scale don't have more tools — they have better architecture. Fewer systems, all connected, with no manual steps between them.
